

The principle: Apollo bills **per seat**, not per brand. One login runs both businesses — you separate them with a **dedicated sending mailbox per brand** plus folders, lists, labels, and sequences. No second license needed (until a second *person* operates one brand).

THE ARCHITECTURE

WHY THIS WORKS

- **Deliverability is per-domain**, not per-account — each brand's domain keeps its own reputation.
- The sending mailbox **is** the brand identity on every email.
- Folders + prefixes make mis-sends obvious before you hit launch.

CURRENT STATE (6/17)

- ☒ 1 mailbox connected: **carlos@proagobranding.co** (Proágo)
- ☐ 0 sequences yet — clean slate
- ☐ **P&G mailbox not yet connected** — the one gap to fix before any PNG send

STEP BY STEP (≈30 MIN, ONE-TIME)

- 1 **Add the P&G mailbox.** Apollo → Settings → Mailboxes → *Link Mailbox*. Connect a cold-sending inbox on **promotengrow.com** (or outreach@promongrow.com). Set daily send limits low at first.
- 2 **Warm it ~2 weeks.** Turn on Apollo's warm-up (or a warmer) before real volume — protects deliverability and keeps you out of spam.
- 3 **Create two folders:** PNG and PC (for sequences + lists). Everything lives in one or the other — nothing loose.
- 4 **Adopt the prefix rule.** Every list, sequence, and saved search starts with PNG · or PC ·. No exceptions — this is what prevents mix-ups.
- 5 **Label every contact** by brand (a custom field or tag: PNG / PC) as you add or import them.
- 6 **Bind sequence → mailbox.** When you build a sequence, set the sending mailbox to that brand's inbox. **PNG sequences → promotengrow.com;** PC sequences → proagobranding.co.
- 7 **Pre-launch check (every time):** confirm folder, prefix, and **sender mailbox** match the brand before you hit start. 5 seconds; saves a brand-bleed disaster.
- 8 **Watch the credit meter.** Both brands draw the same monthly pool — glance at usage so one brand's prospecting doesn't starve the other.

✓ DO

- One mailbox **per brand**, on its own domain
- Prefix everything PNG · / PC ·
- Confirm the sender before every launch
- Keep each domain's SPF/DKIM/DMARC clean
- Tag/label contacts by brand

✗ DON'T

- Send P&G outreach from the Proágo mailbox
- Mix both brands' leads in one untagged list
- Run cold volume on a brand-new, un-warmed inbox
- Assume reporting is per-brand (filter by sequence)
- Buy a 2nd license before a 2nd *person* needs one

WHEN A 2ND LICENSE ACTUALLY EARNS ITS COST

A different **person** operates one brand independently (Venus on P&G + a Proágo teammate) · you need clean **billing separation** (Proágo's costs on Proágo's books) · credit consumption **outgrows** one plan. Until then — one seat, two mailboxes.
