

CONFIDENTIAL

## Pricing Engine

The top-down markup, floor, and vendor-cost logic. Do not share with reps.

CONFIDENTIAL — INTERNAL ONLY

---

**Tu evento, tu marca, hecho bien.**

Promo & Grow · Updated June 2026 · Carlos's eyes only

**Owner:** Carlos A. Diaz Jr · **Updated:** June 6, 2026 **Why isolated:** This file exposes vendor cost and markup multipliers — i.e. it reveals true cost. Per your security model, keep it in your control (password manager / your drive), out of the shared Venus folder. The Master Price Sheet is the rep-facing output of this engine.

## 1. The markup formula

| Tier               | What's in it                                                                                                   | Markup         | Multiplier              |
|--------------------|----------------------------------------------------------------------------------------------------------------|----------------|-------------------------|
| <b>Low-ticket</b>  | Print & marketing collateral — business cards, postcards, flyers, brochures, NCR forms, stickers, small format | <b>400%</b>    | <b>cost × 5</b>         |
| <b>High-ticket</b> | Tents, large-format, trade-show displays, SEG, structural items                                                | <b>80–100%</b> | <b>cost × 1.8 – 2.0</b> |

- **Low-ticket default = ×5.** Confirmed from your business-card Loom ("400% markup"). Go to ×6 on tiny orders / heavy customization / rush; compress toward ×4 on large volume.
- **High-ticket default = ×2.0 (100%).** Compress toward ×1.8 (80%) on big volume, repeat clients, or competitive deals.
- **△ Brochures — confirm.** Your brochure Loom mentioned a different mark ("~188%" in the auto-caption — unclear). The All-Inclusive Flyers/Brochures selling prices on the Master Price Sheet came straight from your 4over quote PDF, so they're correct as listed — but confirm the exact multiplier you want for re-quotes outside those run sizes.

### Tier decision (when it's not obviously catalog)

1. **Category first** — is it print/collateral (low) or tent/large-format/display (high)?
2. **Dollar backstop** — if cost is under ~\$50 → low-ticket; ~\$50+ and structural → high-ticket. (Adjust this threshold to taste.)

## 2. Rounding convention

- Always round to a clean number; drop the cents on the sheet where natural.
- Your business-card pattern: **1,000 → \$108** (rounded clean), larger runs rounded up to clean hundreds (e.g. 5,000 → ~\$291–\$300). Small runs round down a touch to stay friendly; big runs round up.
- Rule of thumb: end on \$X8, \$X5, \$X9, or a clean hundred. Never quote a raw \$487.33 — make it \$495 or \$499.

### 3. The floor (absolute — after negotiation, NOT the target)

- **Minimum order: \$100.** Anything under → raise to \$100 or add setup/handling.
- **Minimum margin under \$1,000: 60%.**
- **Minimum margin \$1,000 and above: 35%.**
- This is the worst-case floor you'll accept after days of back-and-forth or a note/relationship order — **not** the opening price. Open at list (Master Price Sheet). Only walk toward the floor for volume, repeat, or strategic accounts.
- If a client pushes below the floor → **don't** discount past it. Hold, or walk.

### 4. Vendor cost routing (where you get cost)

| Vendor                                    | What routes here                                                                                   | Notes                                                                                                                         |
|-------------------------------------------|----------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| <b>4over</b>                              | All printing & marketing collateral — business cards, postcards, flyers, brochures, NCR forms/pads | Configure product → read cost → apply ×5 → round. Use "generate price markup sheet" to batch. Goal: eventual API integration. |
| <b>B2Sign</b>                             | Large-format, tents, trade-show displays                                                           | <b>Preferred</b> for tents/displays.                                                                                          |
| <b>Tradebanner</b>                        | Same catalog as B2Sign — <b>backup only</b>                                                        | Different cutoff times + production schedule. Use when B2Sign timing doesn't work.                                            |
| <b>Soar Dist USA</b><br>(soardistusa.com) | Complex tents & advanced trade-show setups — incl. <b>full food-vendor enclosed tent</b> systems   | Their tent/display catalog is more complex than B2Sign's; route the specialty/enclosed jobs here.                             |

Vendor logins expose raw cost — keep them as your owner accounts. For Venus's trial, use route-through: she requests the number from you for anything not on the Master Price Sheet. Revisit scoped sub-accounts only once she's proven.

### 5. How a price becomes a set price (the build)

1. Configure the exact product/options in the vendor portal (4over / B2Sign / Soar Dist).
2. Read the vendor cost.
3. Apply the tier markup (§1) → round (§2) → check the floor (§3).
4. That number goes on the **Master Price Sheet** as the rep-facing set price.
5. Re-baseline periodically as vendor costs move.

## 6. Escalate to Proágo (don't run through this engine)

---

Complex branding — vehicle wraps, channel letters/signage fabrication, brand guides/systems — is **Proágo Branding Dept** work (Carlos), not catalog pricing. Rep pitches it, then escalates to you to scope.

---

This engine produced the Master Price Sheet (rep-facing). Keep this file confidential. Pairs with: PNG-Master-Price-Sheet (output) · PNG-Closer-Onboarding-Workbook (rep quoting rules).
